REGULAR, UNCONTROLLED PARTIAL-ONSET SEIZURES?

BE INFORMED. GET SUPPORT. BE EMPOWERED.

About 1 in 3 people with epilepsy who take antiepileptic medication(s) still get seizures. Others get unwanted side effects. New medications to control seizures are needed. But this can happen only through clinical trials and the participation of people like yourself.

If you have uncontrolled partial-onset seizures, consider joining a clinical research study. This clinical study will determine if an investigational treatment works when it is added to your existing antiepileptic medication(s).

You may qualify if you:

- Are 16 years of age or over
- Were diagnosed with epilepsy at least 12 months ago
- Are currently taking one or two antiepileptic medications
- Have had at least 4 partial-onset seizures in the past 4 weeks
- Are willing to document your seizures on a daily basis
- Can provide documentation of your epilepsy diagnosis

If you qualify:

You will receive at no cost to you:

- Care from a team of medical specialists
- Study-related exams and tests, with monitoring of seizures and overall health status
- Investigational study medication or a placebo (an inactive substance)
- Compensation for time and travel to and from study visits may be provided

There is no penalty if the clinical trial doctor is outside your insurer's network.

JOIN A CLINICAL RESEARCH STUDY TO LEARN MORE ABOUT YOUR SEIZURES.
FIND OUT MORE AND SEE IF YOU MAY QUALIFY.

A Walking Aid Designed for Neurological Conditions!

"The U-Step is ideal for patients with multiple sclerosis, parkinson's disease, cerebellar ataxia, muscular dystrophy, ALS, stroke and head trauma."

— Pat Casey, MS, OTR/R
Department of Neurology at Northwestern
Medical Facility Foundation, Chicago, IL

Stability & Safety

The *U-Step's* ultra-stable foundation braces your patient in every direction — it surrounds and moves with him.

The innovative braking system is safe and easy to use. Unlike other walkers, the *U-Step* will not roll until the hand brakes are squeezed.

LaserLight™ for Parkinson's

Introducing *LaserLight™* an exclusive optional feature of the *U-Step*, which is designed specifically to help people with Parkinson's Disease.

Optional feature:
red button for operating
LaserLight™

Features & Benefits

- Improves posture & walking stride
- Rolling resistance control
- Easy turning in tight areas
- Single hand braking
- Height adjustable
- Folds for transport

What Treatments Are Most Effective for Diabetic Nerve Pain?

What medications can help millions of people who live with diabetic nerve pain?
Can electric nerve stimulation provide pain relief?

Learn what neurologists recommend.

The American Academy of Neurology has published Treatment of Painful Diabetic Neuropathy, an evidence-based medical guideline that identifies the most effective treatments for pain from nerve damage in people with diabetes.

Go online to ► www.aan.com/guidelines

to read the summary or the complete guideline.

American Academy of Neurology practice guidelines examine medical evidence on how to best diagnose and treat neurologic disorders. Use these guidelines and patient/family summaries to learn more about:

- Brain injury
- Child neurology
- Dementia
- Movement disorders
- Epilepsy
- Headache and migraine
- Multiple sclerosis
- Neuromuscular disorders
- Stroke

American Academy of Neurology Practice Guidelines
Best Evidence ◆ Best Treatments ◆ Best Outcomes
